1438	YES	YES	30/11/21

### NEW INNOVATION from Walterscheid Hydraulic Top Links available from Vapormatic

These damped hydraulic cylinders from Walterscheid are the first hydraulic top links with an integrated shock absorber, designed to increase the efficiency of agricultural machinery. The accumulator piston, which houses the damping valve, is made of aluminium and has low-friction seals designed to withstand high temperatures across a range of -20°C to 80°C.

In addition, the damped hydraulic cylinder provides increased comfort and safety with improved road-holding properties as well as reduced shocks and counter-shocks. Fewer pressure peaks mean less wear, offering lasting contributions to better productivity and performance.

These new top links are compatible and interchangeable with existing standard top links and can be installed without additional components or the need for additional space.
